Fluidized-Bed Catalytic Cracking Unit is a chemical reaction equipment used in oil refining, which uses fluidized bed technology to carry out catalytic cracking reaction. The reaction efficiency is enhanced by mixing the catalyst particles with the reactants and keeping them suspended. At high temperature, heavy oil molecules are cracked into light products (such as gasoline, diesel, etc.) under the action of the catalyst. The unit has the advantages of high efficiency, good selectivity and flexible operation. It is widely used in the petrochemical industry to increase the added value and output of oil.
