According to our (Global Info Research) latest study, the global Flux Cored Welding Wire For Exhaust Pipe market size was valued at US\$ 85 million in 2024 and is forecast to a readjusted size of USD 65.9 million by 2031 with a CAGR of -3.6% during review period.

Flux-cored arc welding (FCAW) is a versatile and efficient welding process that uses a continuously fed tubular wire electrode filled with flux to create an arc between the wire and the workpiece. The flux inside the wire produces a shielding gas when melted, which protects the weld pool from contamination by the atmosphere, eliminating or reducing the need for external shielding gas. FCAW is particularly well-suited for heavy-duty applications, such as structural steel, shipbuilding, and pipeline welding, due to its high deposition rates, deep penetration, and ability to work in outdoor and windy conditions. This process can be used in both semi-automatic and fully automatic modes, making it popular for high-productivity industries.

The global key Flux Cored Welding Wire manufacturers include ITW-Welding, Kobelco, Bobao Group, Lincoln Electric, Hyundai, Tianjin Golden Bridge, Voestalpine, Jinglei Welding etc. The market of Flux Cored Welding Wire is concentrated, with the top 4 players takes 74% of sales revenue share in 2019. Sales in Asia was 52% of global total sales volume in 2019, which is mainly located in China, Korea and Japan. Sales in North America and Europe are nearly 22% and 22% in 2019 separately. Metal Inert Gas takes more market share than Metal Active Gas.

The flux-cored welding wire market for exhaust pipes is witnessing growth due to the increasing demand for lightweight, durable, and corrosion-resistant materials in the

automotive industry. As vehicle manufacturers focus on improving fuel efficiency and meeting stringent emission standards, exhaust systems are being made with thinner, high-strength materials that require precise welding. Flux-cored wires offer high deposition rates, strong weld integrity, and excellent resistance to heat and corrosion, making them ideal for these applications. Additionally, the rise of electric vehicles and hybrid cars is driving innovations in exhaust systems for reduced emissions, further stimulating demand for advanced welding wires tailored to meet the performance and longevity requirements of modern exhaust components.
