A foam anti-decubitus pad, also known as a pressure ulcer or pressure sore prevention pad, is a specialized medical device designed to help prevent the development of pressure ulcers or bedsores in individuals who are at risk due to extended periods of immobility. Pressure ulcers can occur when sustained pressure and friction on the skin and underlying tissues lead to damage, particularly in bony areas like the heels, hips, tailbone, and elbows. Foam anti-decubitus pads are used to reduce these pressure points, enhance comfort, and support overall skin integrity.

Manufacturers are continually developing and testing new foam materials that provide superior pressure redistribution, conformability, and durability. These materials aim to improve patient comfort and reduce the risk of pressure ulcers.
