Glasses are optical devices used for vision correction, eye protection or decoration, mainly composed of lenses and frames. Lenses are the core carrier of the functional attributes of glasses, which are used to achieve vision correction and eye protection functions. Spectacle frames are usually composed of frames, mirror rings, lenses, bridges, temples, and nose pads. Their core functions are matched with lenses to form glasses, which can be worn on the face as a support. With the deepening of vision health problems, people's demand for glasses is becoming stronger and stronger, and the demand for glasses products in China is also growing. According to statistics, in 2022, the retail market of optical products in China will reach 89.8 billion yuan, a year-on-year increase of 5.65%. With the upgrading of the consumption structure, glasses are no longer simply a tool for correcting eyesight. Frames have become fashionable accessories due to their characteristics of modifying the face shape and various styles. Consumers have high requirements for the weight, comfort and aesthetics of the frames. It is also constantly improving. From the perspective of material application evolution, consumers' preference cycle for frames has a similar cycle attribute to the cycle of popular single products. Around 2000, the mainstream application material for mirror frames was plastic. Around 2010, metal materials gradually became the mainstream, and after 2020, plastic materials showed a certain recovery trend, and the proportion of applications was slowly picking up. In addition, plastic and metal mixed material frames have entered the public eye. Mixed material frames not only combine the advantages of plastic materials in terms of texture and shape, but also realize the

characteristics of metal materials in terms of durability. The proportion of applications is constantly increasing. In the future, consumers will pay more and more attention to the product characteristics of comfortable and beautiful frames when worn, and mixed material frames may become a new mainstream material in the future.
