Abstracts

According to our (Global Info Research) latest study, the global Food Grade Machinery Lubricant market size was valued at US\$ 343 million in 2024 and is forecast to a readjusted size of USD 414 million by 2031 with a CAGR of 3.1% during review period.

Food grade machinery lubricants are industrial lubricants that are harmless to humans and can be used on equipment used to make food, medicine, and animal feed. Food-grade lubricants are in the same form as lubricants used in general industrial equipment, including liquid lubricating oils, semi-solid greases/lubricating pastes, solid lubricating waxes, etc. These lubricants are strictly regulated to ensure that they do not contaminate food and pose health risks.

As consumer concerns about food safety continue to rise, there is an increasing focus on ensuring that products are manufactured in hygienic environments. Food-grade lubricants, which are formulated to prevent contamination, have gained significant importance in food processing and packaging industries. Manufacturers are more aware of the need to use food-grade lubricants to comply with safety standards set by regulatory bodies like the FDA, NSF, and ISO 21469. The demand for lubricants that are non-toxic, non-contaminating, and easy to clean has therefore increased.

Emerging economies, particularly in Asia-Pacific and Latin America, are experiencing rapid growth in their food and beverage sectors, leading to increased demand for food-grade lubricants. This trend is being driven by the growth of the food processing, dairy, beverage, meat, and poultry industries in these regions. As food production in these areas scales up, the need for high-quality lubricants compliant with international food safety standards grows.

Ongoing innovations in lubricant formulations are enabling the development of high-performance, versatile lubricants that can handle extreme conditions, such as high temperatures, moisture, and pressure, often found in food processing environments. The demand for lubricants that can perform better and last longer under harsh conditions (e.g., pelletizing, grinding, or mixing) is growing. New formulations offer enhanced stability, extended service life, and improved resistance to oxidative degradation, making them suitable for a wider range of food processing applications.

The increasing demand for high-quality, convenient, and processed foods (such as frozen foods, ready-to-eat meals, and packaged snacks) is driving the need for efficient and safe production methods. Lubricants are required for a variety of processes, from mixing ingredients to packaging, and need to meet high hygiene standards to ensure product quality. The rise of processed and packaged foods in both developed and developing markets boosts the demand for food-grade lubricants.
