Abstracts

According to our (Global Info Research) latest study, the global Food Grade Sorbitol Solution market size was valued at US\$ 1061 million in 2025 and is forecast to a readjusted size of US\$ 1445 million by 2032 with a CAGR of 4.5% during review period.

In 2025, the global production of food-grade sorbitol solution is approximately 1.35 million tons, with an average selling price of about US\$764 per ton. The capacity of a single production line is approximately 45,000 tons per year, with an average gross profit margin of about 10-25%. Food-grade sorbitol solution is a colorless, transparent liquid produced from glucose through hydrogenation, refining, and concentration. It is a safe food additive, mainly used as a sweetener (sweetness is about 60% of sucrose, but it does not raise blood sugar), a humectant (to prevent food from drying out and to preserve freshness), a stabilizer, and an excipient. It is widely used in sugar-free foods, baked goods, confectionery, and beverages, and is particularly suitable for people with diabetes, obesity, and those who need to control their blood sugar levels.

The upstream raw materials for food-grade sorbitol solution mainly come from agricultural deep-processing products, with corn starch as the core ingredient. Glucose syrup, produced from corn starch through enzymatic saccharification, is its direct raw material; in addition, tapioca starch and wheat starch are also optional raw materials, and hydrogen is a key auxiliary material in the hydrogenation process. Its downstream applications are extensive, mainly used as a sweetener and humectant in sugar-free candies, chocolates, baked goods, beverages, frozen desserts, and meat products.
