Forestry Tracked Harvester is a heavy-duty machine designed for forest operations. It uses a crawler chassis and has strong terrain adaptability, making it suitable for operations on steep, soft or rugged forest land. This equipment integrates tree felling, branching, cutting and processing functions. It is usually equipped with an advanced harvester head that can handle a variety of tree sizes to ensure efficient and precise operations. Its crawler system provides greater stability and traction, reduces pressure on the ground, and reduces the impact of soil compaction on forest ecology.
