According to our (Global Info Research) latest study, the global Forestry Wheel Harvester market size was valued at US\$ 542 million in 2024 and is forecast to a readjusted size of USD 701 million by 2031 with a CAGR of 4.1% during review period.

Forestry Wheel Harvester is a heavy-duty machine specially used for forestry operations. It is designed with a wheeled chassis and can efficiently complete tasks such as tree felling, branching and cutting in the woodland. It is usually equipped with a powerful hydraulic system, an advanced felling head (Harvester Head) and a precise control system to ensure that trees of different diameters can be handled quickly and safely. Compared with crawler fellers, wheeled fellers are particularly suitable for flat or moderately undulating forest environments due to their flexibility, lower ground pressure and higher moving speed.
