According to our (Global Info Research) latest study, the global Forsythia Oil market size was valued at US\$ 12.84 million in 2025 and is forecast to a readjusted size of US\$ 21.22 million by 2032 with a CAGR of 7.4% during review period.

In 2025, the global production of Forsythia oil is estimated to be approximately 130 tons, with an average selling price of about US\$96 per kilogram. The scale of single-line production capacity varies depending on the production process and investment scale, with an average gross profit margin of approximately 20-30%. Forsythia oil is a natural volatile oil extracted from the fruits of the Forsythia plant. It is typically a colorless to pale yellow liquid with a characteristic Forsythia aroma. It is mainly used in pharmaceuticals, skincare products, and health supplements. Its components include α -pinene and linalool, and it possesses pharmacological properties such as clearing heat and detoxifying.

The core upstream raw materials for Forsythia oil are mainly the fruits and leaves of the Forsythia plant, with the fruits having a higher oil yield and effective ingredient content, making them the primary extraction material. Its downstream applications are extensive, mainly including the traditional Chinese medicine industry (used in traditional Chinese medicines for clearing heat and detoxification), the cosmetics and personal care industry (used as a natural antibacterial and antioxidant ingredient in skincare and personal care products), the food and health supplement industry (used as a natural preservative or functional ingredient), and the increasingly popular natural daily chemical and aromatherapy fields.
