A left ventricular assist device (LVAD) is a medical device helps heart pump better when patients have heart failure. Some people use this while waiting for a heart transplant. The MagLev (Magnetic Levitation) ventricular assist device (VAD), also known as a magnetic levitation artificial heart, is an advanced medical device used to treat severe heart failure. The magnetic levitation VAD belongs to the third generation of centrifugal pump type VAD, which is divided into fully magnetic levitation and magnetic-fluid hybrid levitation bearing technology. Depending on their location, fully magnetic levitation VADs can generally be divided into left ventricular assist devices (LVADs), right ventricular assist devices (RVADs), and biventricular assist devices (BiVADs).

Currently, the global fully magnetic left levitation ventricular assist device (LVAD) market is monopolized by Abbott's HeartMate 3, which has now become the most commonly used left ventricular assist device (LVAD) in the world, with a market share of over 80%.

From the perspective of the global LVAD device market, the main manufacturer in the United States is Abbott, and full magnetic levitation products have become the absolute

mainstream. Competition in Europe is more intense, with more products approved earlier, but they are mainly used the second-generation technology (axial pump). The main player is Berlin heart CmbH.
