According to our (Global Info Research) latest study, the global Gamma Beam Stereotactic Radiotherapy System market size was valued at US\$ 158 million in 2024 and is forecast to a readjusted size of USD 254 million by 2031 with a CAGR of 7.0% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Before treatment, the gamma beam stereotactic radiotherapy system can perform image-guided positioning verification on the patient based on CBCT imaging technology and orthogonal imaging technology. The imaging system can detect the patient's positioning deviation before treatment and notify the control system to make necessary position adjustments to ensure that the correct planned treatment target area is delivered to the treatment area. During the treatment process, real-time image guidance based on orthogonal imaging technology can be performed. The real-time image guidance technology can monitor the changes in the patient's position in real time, and make real-time adjustments to the patient's position error that exceeds the clinically acceptable range, thereby ensuring the target position accuracy of radiotherapy, improving the clinical efficacy of radiotherapy, avoiding unnecessary irradiation of normal tissues, and ensuring the position accuracy of patients during treatment.
