A gastric space-occupying device is a non-surgical medical tool designed to aid in weight loss by occupying space within the stomach, helping patients control their food intake and reduce body weight. Typically made from balloons or other flexible materials, the device is inserted into the stomach via endoscopy, creating a feeling of fullness and decreasing appetite during meals. Gastric space-occupying devices are particularly beneficial for obese patients who have not responded well to traditional weight loss methods, offering a lower surgical risk and shorter recovery time.
