A Gastrostomy-Jejunostomy Tube (GJ-Tube) is a medical device that combines both a gastrostomy tube (G-tube) and a jejunostomy tube (J-tube). The GJ-tube is inserted through the stomach, with one end located in the stomach and the other end extending into the jejunum, a part of the small intestine. This dual-purpose tube allows for feeding directly into the stomach or the jejunum, making it suitable for patients who need gastric decompression but also require nutrition to bypass the stomach due to conditions like severe reflux, gastrointestinal obstruction, or neurological disorders.
