## Abstracts

According to our (Global Info Research) latest study, the global Gene Overexpression Cell Line Construction Service market size was valued at US\$ 978 million in 2025 and is forecast to a readjusted size of US\$ 1616 million by 2032 with a CAGR of 7.5% during review period.

Gene overexpression cell line construction services refer to the process of introducing a target gene into a host cell via transfection or transduction, allowing the gene to be expressed at levels higher than the normal endogenous expression. These services are widely used in gene function research, protein expression, drug screening, vaccine development, and other fields. Service providers typically customize suitable cell lines and optimize expression systems to ensure the efficiency and stability of gene overexpression.

The global Gene Overexpression Cell Line Construction Service market is steadily growing alongside biopharmaceutical R&D, gene therapy advancements, and basic research investment. North America and Europe, as mature markets, leverage leading CHO cell expression systems, comprehensive industrial-grade cell line development platforms, and stringent quality control systems to hold leading positions in high-expression stable strain screening, serum-free suspension adaptation, and GMP-grade cell bank construction. The Asia-Pacific region is the fastest-growing and most in-demand sector. Driven by the biopharmaceutical R&D outsourcing boom, the antibody drug explosion, and cell therapy research, China and Southeast Asian countries are rapidly popularizing lentivirus-mediated overexpression, monoclonal screening, and customized stable transgene services, leading to the rapid rise of local CROs. The industry as a whole is accelerating its evolution towards site-specific integration

technologies, high-yield culture medium development, and high-throughput automated screening.
