General grade chip ferrite beads can be widely used in many applications, like advanced hand-held devices, Cellular phones, Bluetooth headsets, PDAs, GPS, MP3 players, Digital camcorders and cameras?etc.

General-purpose chip ferrite beads are a common electronic component, also known as chip beads or chip pillars. They are commonly used for EMI filtering and signal interference suppression in electronic circuits. Ferrite beads are small components made of ferrite material that appear as cylindrical or square magnetic pieces. These beads absorb high frequency noise and EMI (Electromagnetic Interference) by connecting them in series or in parallel in a circuit. They mainly play the role of suppressing high-frequency noise and EMI interference on the high-frequency signal transmission line to improve the stability and anti-interference ability of the circuit.
