DC Contactors are designed to control the line isolation, starting, stopping, reversing, and regulating functions of a DC motor. DC Contactors are comprised of a high current switch and a solenoid in a single enclosure. The switch provides the desired function, to turn current flow on and off. General Purpose DC Contactors refer to the contactors for usually industrial or commercial use.

Universal DC contactor is an electrical switching device for DC circuits. They are commonly used to control and switch DC currents and are used in a wide range of applications in industry, transportation, automotive, aerospace and energy. Universal DC contactors are capable of handling high currents and high voltages, making them suitable for high power DC circuits. They are used to turn circuits on and off for the control and operation of equipment. Universal DC contactors are usually made of durable materials and designs to ensure reliability under long-term use and high load conditions. They provide isolation between different circuits, protecting circuits from interference or malfunction.
