Gigabit Internet Service refers to a broadband internet offering that provides maximum data transfer speeds of approximately 1 gigabit per second (1 Gbps), equivalent to 1,000 megabits per second (Mbps), for downloads and, in some cases, uploads. In practical terms, gigabit internet enables ultra-high-speed data transmission suitable for bandwidth-intensive activities such as 4K/8K video streaming, cloud computing, large file transfers, real-time collaboration, online gaming, and enterprise-grade applications. It is most commonly delivered through fiber-optic networks (FTTH/FTTP), though it can also be offered via advanced cable (DOCSIS 3.1/4.0) or fixed wireless technologies. Gigabit service is typically marketed to residential power users, small and medium businesses, enterprises, and data-intensive institutions, where low latency, high reliability, and simultaneous multi-device connectivity are critical.
