Abstracts

According to our (Global Info Research) latest study, the global 0/1-10V Dimmable LED Driver market size was valued at US\$ 217 million in 2023 and is forecast to a readjusted size of USD 313 million by 2030 with a CAGR of 5.4% during review period.

0-10V and 1-10V dimming power supplies are two common dimming control power supplies. They adjust the output power by receiving a voltage signal of 0 to 10V or 1 to 10V, thereby controlling the brightness or working state of the load. The main features of these two power supplies are that they can provide linear and smooth dimming effects. The 0-10V dimming power supply starts dimming from zero voltage, while the 1-10V dimming power supply starts from 1V, avoiding instability at low brightness. They have the advantages of high control accuracy, wide dimming range, and good compatibility. They can be easily matched with various dimming control devices to achieve precise light adjustment. In addition, the design of these two dimming power supplies is usually compact, easy to install and maintain, and can provide users with efficient and convenient dimming solutions while ensuring system stability and reliability, thereby improving the user experience.
