## Abstracts

The global 1-Benzyl-2-Methylimidazole market size is expected to reach \$ 15.51 million by 2032, rising at a market growth of 6.6% CAGR during the forecast period (2026-2032).

In 2025, global sales volume of 1-Benzyl-2-Methylimidazole was approximately 113 tons, with an average global market price of around USD 85/kg. The gross margin of major manufacturers in the industry was approximately 25%–45%.

1-Benzyl-2-Methylimidazole (CAS No. 13750-62-4) is an N-benzyl-substituted imidazole fine chemical product, mainly used as an epoxy resin curing accelerator and curing catalyst. Its molecular structure contains an imidazole ring, which can promote the ring-opening reaction of epoxy groups and improve the curing speed and crosslinking efficiency of epoxy resin systems. Compared with conventional amine accelerators, 1-Benzyl-2-Methylimidazole features relatively high catalytic activity, low dosage, good compatibility with epoxy resins, and favorable heat resistance and electrical insulation performance in cured systems.

As this product is not a bulk commodity chemical, the number of publicly verifiable specialized manufacturers is limited. Customers place greater emphasis on product purity, color, moisture content, batch-to-batch stability, and compatibility with epoxy systems, resulting in a relatively more concentrated supply structure for high-end electronic material grades. However, in general industrial applications, it can be partially replaced by other imidazole-based curing accelerators. Therefore, leading manufacturers have certain technical advantages and customer stickiness, while their overall bargaining power is still affected by substitutes and customized supply models.

This report studies the global 1-Benzyl-2-Methylimidazole production, demand, key manufacturers, and key regions.
