Abstracts

According to our (Global Info Research) latest study, the global 1-Benzyl-2-Methylimidazole market size was valued at US\$ 9.89 million in 2025 and is forecast to a readjusted size of US\$ 15.51 million by 2032 with a CAGR of 6.6% during review period.

In 2025, global sales volume of 1-Benzyl-2-Methylimidazole was approximately 113 tons, with an average global market price of around USD 85/kg. The gross margin of major manufacturers in the industry was approximately 25%–45%.

1-Benzyl-2-Methylimidazole (CAS No. 13750-62-4) is an N-benzyl-substituted imidazole fine chemical product, mainly used as an epoxy resin curing accelerator and curing catalyst. Its molecular structure contains an imidazole ring, which can promote the ring-opening reaction of epoxy groups and improve the curing speed and crosslinking efficiency of epoxy resin systems. Compared with conventional amine accelerators, 1-Benzyl-2-Methylimidazole features relatively high catalytic activity, low dosage, good compatibility with epoxy resins, and favorable heat resistance and electrical insulation performance in cured systems.

As this product is not a bulk commodity chemical, the number of publicly verifiable specialized manufacturers is limited. Customers place greater emphasis on product purity, color, moisture content, batch-to-batch stability, and compatibility with epoxy systems, resulting in a relatively more concentrated supply structure for high-end electronic material grades. However, in general industrial applications, it can be partially replaced by other imidazole-based curing accelerators. Therefore, leading manufacturers have certain technical advantages and customer stickiness, while their

overall bargaining power is still affected by substitutes and customized supply models.
