Abstracts

The global 1-Methoxy-2-Propanol(PM) market size is expected to reach \$ 1659 million by 2032, rising at a market growth of 4.5% CAGR during the forecast period (2026-2032).

1-Methoxy-2-Propanol (PM) is an important organic solvent of the propylene glycol ether class, with the chemical formula $C_4H_{10}O_2$. It is mainly composed of an alpha structure (1-methoxy-2-propanol) and has good solubility, moderate volatilization rate, and low toxicity characteristics. It can be miscible with water and various organic solvents, and can effectively dissolve various components in resin, ink, and coating systems. PM is widely used in water-based coatings, inks, cleaning agents, and electronic chemicals. It is also an important intermediate for the synthesis of propylene glycol methyl ether acetate (PMA) and plays an important role in fine chemical systems. In 2025, global 1-Methoxy-2-Propanol (PM) production reached approximately 957 K MT, with an average global market price of around US\$ 1,234 per MT.

The 1-Methoxy-2-Propanol (PM) market is a typical bulk solvent chemical market, with a large overall scale and stable demand structure. The industry is mainly driven by downstream demand for coatings, inks, and industrial cleaning. From the demand side, with the promotion of environmental policies to replace traditional solvent based coatings with water-based coatings, the demand for PM as a key co solvent and film-forming agent continues to steadily increase. At the same time, the increasing demand for high-purity solvents in the electronic manufacturing field also provides incremental space for high-end products; From the supply side, PM production relies on the upstream propylene oxide industry chain, with relatively limited barriers to entry and moderate concentration of production capacity. Prices are greatly affected by raw material costs and cyclical supply and demand changes. In the future, with the

tightening of environmental regulations and the increasing demand for high-end electronic chemicals, the PM market will show a structural development trend of 'stable basic demand+growth in high-end demand', but overall it still has obvious cyclical and price fluctuation characteristics.
