Abstracts

The global 1-Methoxy-2-propyl Acetate (PMA) market size is expected to reach \$ 1918 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

1-Methoxy-2-propyl Acetate (PMA) is a propylene glycol ether ester solvent generated by esterification of propylene glycol methyl ether, with the chemical formula $C_6H_{12}O_3$. It has excellent solubility, slow volatilization rate, and good leveling performance, which can effectively improve the quality of coating film formation. PMA is usually mainly composed of alpha isomers, with low toxicity, low odor, and good environmental performance. It can be compatible with various resin systems and is widely used in high-end coatings, inks, electronic chemicals, and cleaning agents. At the same time, it also plays an important role in photoresist solvent systems and is one of the important solvents in the fields of fine chemicals and electronic materials. In 2025, global 1-Methoxy-2-propyl Acetate (PMA) production reached approximately 879 K MT, with an average global market price of around US\$ 1,562 per MT.

The market for 1-Methoxy-2-propyl Acetate (PMA) belongs to the mid to high end solvent segment. Compared to basic solvents, its added value is higher and its applications are more inclined towards high-performance material systems. From the demand side, PMA is mainly used in automotive coatings, industrial coatings, and printing inks. At the same time, it continues to grow in demand as a photoresist solvent in electronic manufacturing fields such as semiconductors and display panels, becoming an important driving force for market upgrading; From the supply side, PMA is based on propylene glycol methyl ether as the basic raw material, and the industrial chain is relatively mature. However, high-purity electronic grade products have certain technical barriers in impurity control and stability, and the industry presents the

characteristics of 'moderate concentration+high-end subdivision barriers'. In the future, as environmental regulations become stricter, the penetration rate of water-based and high solid content coatings increases, and the demand for high-purity solvents in the semiconductor and display industries grows, the PMA market will maintain steady growth and show a trend towards upgrading towards high purification and functionalization. However, overall, it is still affected by macro manufacturing cycles and fluctuations in upstream raw material prices.
