According to our (Global Info Research) latest study, the global 1-Phenoxy-2-Propanol market size was valued at US\$ 57.26 million in 2025 and is forecast to a readjusted size of US\$ 74.37 million by 2032 with a CAGR of 3.8% during review period.

1-Phenoxy-2-propanol (also known as phenoxyisopropanol or propylene glycol phenyl ether) is an important organic compound. Typically appearing as a colorless to pale yellow transparent liquid, it is characterized by a high boiling point, slow evaporation rate, strong solvency, and a relatively mild odor; it is capable of dissolving a wide range of resins, oils, dyes, and organic additives.

The upstream raw materials for 1-phenoxy-2-propanol are primarily the basic chemical products phenol and propylene oxide. It has diverse downstream applications: in the pharmaceutical industry, it serves as a key intermediate for the synthesis of certain antibacterial agents and drugs; in the cosmetics industry, thanks to its excellent solvency and low irritation, it is frequently used as a preservative and stabilizer in formulations such as creams and lotions; and in the dye industry, it acts as a solvent or auxiliary agent to improve dye solubility and dispersion stability during the dyeing process.

In 2025, global sales volume is approximately 21,000 metric tons, the average selling price among major enterprises is around US\$2,650 per metric ton, and the gross profit margin for leading manufacturers ranges from approximately 20% to 30%.

1-Phenoxy-2-propanol is a specialty alcohol-ether solvent that, while limited in scale, offers distinct performance advantages; demand is primarily driven by the growth of

water-based coatings, low-odor industrial formulations, latex film-forming applications, and the upgrading of household and industrial cleaning products. Its high boiling point, slow evaporation rate, and ability to dissolve oils, resins, and hard-to-solubilize components make it difficult to replace directly with conventional low-boiling-point solvents in certain formulations; however, it faces competition from other film-forming aids, benzyl alcohol, phenoxyethanol, and other alcohol-ether solvents, and its slow evaporation rate can lead to extended drying times. The industry is likely to see moderate growth in the future, with key areas for product upgrading focusing on high purity, low color, low residual phenol content, and customization for water-based coatings and cleaning formulations.
