According to our (Global Info Research) latest study, the global 1000V Automotive Multilayer Ceramic Capacitors (MLCC) market size was valued at US\$ 1393 million in 2025 and is forecast to a readjusted size of US\$ 2806 million by 2032 with a CAGR of 10.6% during review period.

1000V Automotive Multilayer Ceramic Capacitors (MLCCs) are critical components in modern automotive electronics. These capacitors offer high voltage handling capabilities, making them suitable for various high-stress applications within vehicles, such as powertrains, safety systems, and advanced driver-assistance systems (ADAS).

Among the many passive components, MLCCs (Multilayer Ceramic Capacitors) are one type of component that is often utilized in on-board electrical and electronic circuits in particular. Capable of realizing a miniature size and high capacitance while maintaining their characteristics in a hostile environment, the features of MLCCs are perfect for on-board use, which requires them to be utilized in electrical and electronic circuits in narrow and unforgiving spaces. Currently, as many as 3,000 to 5,000 MLCCs are utilized per vehicle. Looking at a smartphone as a representative example of an advanced electronic device, if we consider that even the latest high-end model includes 1,000 MLCCs, contemporary cars could be described as a “collection of MLCCs.” Therefore, the type and number of MLCCs utilized in cars may further increase as the CASE trend progresses.
