Abstracts

The global 1,2-Ethylene Thiourea market size is expected to reach \$ 387 million by 2032, rising at a market growth of 3.3% CAGR during the forecast period (2026-2032). 1,2-ethylene thiourea is an organosulfur compound commonly used as a fast vulcanization accelerator for rubber (especially chloroprene rubber). It is also an imidazoline compound, and the pure product is usually a white powder. The core upstream raw materials are ethylenediamine and carbon disulfide. The production capacity and price of ethylenediamine are subject to significant fluctuations influenced by downstream demand in the petrochemical industry. Global sales in 2025 are projected to be approximately 72,300 tons, with an average market price of approximately US\$4,130 per ton. The industry's gross profit margin is approximately 18-25%.
