According to our (Global Info Research) latest study, the global 12 Inch Silicon Wafers market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Silicon wafers are the most important basic raw material for chip manufacturing. With the demand for various semiconductor applications, the silicon wafer market shipments and demand have continued to increase. The economic benefits brought by the use of large-size silicon wafers in integrated circuits are obvious. For example, the area of a 12-inch silicon wafer is 2.25 times that of an 8-inch silicon wafer, and the usability rate is about 2.5 times that of an 8-inch silicon wafer. The number of chips that can be produced by a single chip increases. The cost of the chip decreases. As the industry's requirements for production capacity increase significantly, the advantages of 12-inch silicon wafers are becoming more and more obvious.
