## Abstracts

Wafer reclaiming is the process of refurbishing and reusing wafers that have defects or are no longer suitable for their original purpose. Instead of discarding these wafers, wafer reclaiming services provide a cost-effective and environmentally friendly solution to recover their value. The process involves removing the old layers, polishing the wafers, and applying new films, thereby restoring them to a usable state. 12-inch or 300mm wafers are the most mainstream currently and account for the highest market share in the recycled wafer market.
