The 1200-ton thin plate press is a heavy-duty mechanical equipment specially designed for processing the press forming of various plastic materials. It has a pressing capacity of 1200 tons and can handle a variety of high-intensity pressing tasks. 1200 ton thin plate press usually adopts four-column structure design, such as three-beam four-column, four-beam four-column, etc. 1200 ton thin plate press is mainly composed of main machine, hydraulic system, electrical system and operating system. The main machine includes the machine body, oil cylinder, travel limit device, mold, etc. The machine body is composed of upper and lower beams, slides, worktables, columns and other components to ensure the stability and rigidity of the equipment. It is mainly used for the pressing and forming of various plastic materials, including but not limited to stamping, bending, flanging, stretching, forming, blanking, bending and other processes of thin plate parts. It can be applied to the pressing of various materials, such as metals, plastics, composite materials, etc.

With the advancement of science and technology, the 1200-ton thin plate press market is gradually moving towards automation and intelligence. Manufacturers are beginning to apply automation and digitalization technologies to their products to improve production efficiency and product quality. Technological innovation is an important factor driving the development of the 1200-ton thin plate press market. With the continuous advancement of science and technology, new presses are emerging with higher precision, efficiency and automation. This will help expand the market size and
