Abstracts

The global 1,3-Dimethylimidazolium Chloride market size is expected to reach \$ 17.38 million by 2032, rising at a market growth of 4.8% CAGR during the forecast period (2026-2032).

1,3-Dimethylimidazolium chloride is an organic salt commonly found in the field of ionic liquids. It is typically a white solid, readily soluble in polar solvents such as water and ethanol, and is used as an important ionic liquid precursor or component in certain (e.g., functionalized) imidazolium salts.

The main upstream raw materials include 1-methylimidazole and chloromethane. 1-methylimidazole is a fine chemical intermediate, and its price and supply stability directly affect the cost of this product; chloromethane is usually derived from petrochemical or chlor-alkali industries.

Global sales in 2025 are projected to be approximately 140 tons, with an average market price of approximately US\$87 per kilogram. The industry's gross profit margin is in the range of 10%-25%.
