The global 1.3-inch OLEDoS Display market size is expected to reach \$ 729 million by 2032, rising at a market growth of 28.0% CAGR during the forecast period (2026-2032).

OLEDoS (OLED on Silicon) is a self-emissive, ultra-high-resolution, small-size microdisplay device formed by directly fabricating OLED organic light-emitting materials on a silicon wafer using a single-crystal silicon CMOS wafer as the driving backplane. A 1.3-inch OLEDoS specifically refers to a silicon-based OLED microdisplay with an effective display diagonal of approximately 1.3 inches (the industry commonly includes 1.30?1.35 inches), and is currently the mainstream size for high-end VR/AR near-eye displays.

The commercial unit price of a 1.3-inch OLEDoS is approximately US\$40?120, with high-end 4K models reaching US\$200. The industry chain is led by Sony and Samsung, with domestic companies like Guozhao Optoelectronics and Visionox rapidly increasing production, covering silicon-based CMOS driving, OLED light emission, and packaging modules. With improved yield and capacity expansion, prices are steadily declining.

This report studies the global 1.3-inch OLEDoS Display production, demand, key manufacturers, and key regions.
