Abstracts

Mainly used as curing agent for polyester powder, also used in manufacturing laminates, printed circuits, tools, adhesives, plastic stabilizers, etc. Used for cross-linking and curing of pure polyester powder coatings, acrylic polyester containing carboxyl group, self-extinguishing polymers, modified epoxy resins, preparation of high-efficiency adhesives, etc. Curing agent for electronic printing ink (LCD, CCD). It can be used as cross-linking aid and radiation-assisted cross-linking agent for rubber and plastics. It is effective in improving the degree of cross-linking and reducing the radiation dose. Because of the high crosslinking density of TGIC homopolymer, it is widely used in the industrial production of adhesives, cables, paper and organic glass to enhance the strength of other substrates in the process of polymerization.
