Abstracts

According to our (Global Info Research) latest study, the global 1,4-Cyclohexanediol market size was valued at US\$ 211 million in 2025 and is forecast to a readjusted size of US\$ 304 million by 2032 with a CAGR of 5.4% during review period.

1,4-Cyclohexanediol is a cyclic diol compound containing two hydroxyl groups, with the chemical formula $C_6H_{12}O_2$. It is a dihydroxy derivative of cyclohexane, with the hydroxyl groups located on carbon atoms 1 and 4, and has two isomers, cis and trans. The presence of dihydroxy groups makes it highly reactive and can participate in a variety of chemical reactions, such as esterification, oxidation, and condensation. It appears as a white solid or powdery crystal. The melting point is about 110-115°C (depending on the isomer). It is soluble in water, alcohols, and other polar solvents.

Compared with 1,4-cyclohexanedimethanol, although the two have similar names, in terms of use, 1,4-cyclohexanedimethanol is more commonly used in engineering plastics and coating resins, while 1,4-cyclohexanediol is more commonly used in medicine and high-performance materials.

With the continuous development of the global economy, the demand for 1,4-cyclohexanediol in downstream industries such as polyester materials, coating materials, and liquid crystal materials continues to increase. For example, in the field of polyester materials, 1,4-cyclohexanediol can be used to produce high-performance polyester fibers, engineering plastics, etc. As people pursue high-quality life, the demand for these high-performance materials is also rising, which has brought a broad market space for the 1,4-cyclohexanediol industry.

The continuous development of new production processes and catalysts helps to improve the production efficiency, reduce production costs and improve product quality of 1,4-cyclohexanediol. This not only enhances the competitiveness of enterprises, but also makes the application range of 1,4-cyclohexanediol wider and further expands the market. For example, by optimizing reaction conditions and improving catalysts, the production process can be made more efficient and environmentally friendly, while improving the purity and stability of the product.

In the context of increasingly stringent environmental protection policies, 1,4-cyclohexanediol, as a relatively environmentally friendly chemical raw material, is expected to increase its market demand. Compared with some traditional chemical products, 1,4-cyclohexanediol produces fewer pollutants during production and use, which meets the requirements of sustainable development. For example, in industries such as coatings and plastics, the use of 1,4-cyclohexanediol can reduce the emission of volatile organic compounds (VOCs), helping companies meet the requirements of environmental regulations.

The relevant industrial policies issued by the government, such as support policies for high-performance materials, new energy vehicles and other fields, have indirectly promoted the development of the 1,4-cyclohexanediol industry. These policies encourage companies to increase R&D investment, improve product quality and technical level, and promote the application of 1,4-cyclohexanediol in related fields.
