## Abstracts

The global 144Hz+ Gaming Monitor market size is expected to reach \$ 33298 million by 2032, rising at a market growth of 9.9% CAGR during the forecast period (2026-2032).

144Hz+ gaming monitors are display devices with refresh rates of 144Hz or higher, designed to deliver smoother motion, lower input latency, and improved visual clarity for high-frame-rate gaming. Compared with standard 60Hz or 75Hz displays, these monitors can render more frames per second, significantly reducing motion blur and screen tearing. They are typically equipped with fast-response panels, variable refresh rate technologies, and high-bandwidth interfaces to fully leverage the performance of modern GPUs, making them widely used in esports, competitive gaming, and high-performance PC gaming.

The market is driven by the continued growth of esports and high-performance PC gaming, where competitive players demand smoother visuals and faster response times. Rapid advancements in GPU and CPU performance have made high frame rates more accessible, accelerating the transition of 144Hz+ monitors from niche premium products to mainstream gaming displays. In addition, declining panel costs, simultaneous improvements in resolution and refresh rate, and increasing support for high-refresh-rate output in gaming consoles are expanding the overall addressable market.

This report studies the global 144Hz+ Gaming Monitor production, demand, key manufacturers, and key regions.
