According to our (Global Info Research) latest study, the global 14nm Wafer Foundry market size was valued at US$ 8309 million in 2025 and is forecast to a readjusted size of US$ 25950 million by 2032 with a CAGR of 17.9% during review period.

14nm wafer foundry technology is one of the advanced processes in the current semiconductor industry. It allows more transistors to be integrated on a smaller wafer area, thereby improving the performance and energy efficiency of the chip. 14nm wafer foundry technology faces many challenges, such as lithography accuracy, process control, and yield improvement. Globally, there are relatively few foundries that can achieve mass production of 14nm wafers, mainly Samsung, UMC, GlobalFoundries, SMIC, etc., while TSMC's process closest to 14nm is 16/12nm. With the continuous development of the semiconductor industry, 14nm wafer foundry technology will continue to maintain its important position.
