Abstracts

According to our (Global Info Research) latest study, the global 1536-Well Microplates market size was valued at USD 33 million in 2023 and is forecast to a readjusted size of USD 50 million by 2030 with a CAGR of 6.3% during review period.

Microplates are laboratory equipment that consist of a plate with multiple cavities (wells) used as small sample tubes. They are also referred to as microtiter plates or multi-wells and typically come in 6-, 12-, 24-, 48-, 96-, 384- or 1536-well formats with the 96-well layout being the most commonly used. Depending on the well size, they can hold microliter to millilitre volumes of sample.

Microplates facilitate the preparation, handling, examination, processing, and management of many samples. Today, they are a standard in life science and pharmaceutical research as well as in clinical diagnostics and analytical research. Enzyme-linked immunosorbent assays (ELISA) are one of the most commonly used applications. However, uses are diverse and widespread in the life sciences including sample storage, filtration, separation and mixing, as well as sample detection and quantification.

1536-well microplates are specialized laboratory plates designed to accommodate 1536 individual wells for holding liquid samples or reagents. These microplates are commonly used in high-throughput screening assays and other scientific research applications, allowing researchers to conduct a large number of experiments simultaneously.

The development of 1536-well microplates can be traced back to the early 2000s when there was a growing demand for higher-density microplate formats. Earlier, microplates

with lower well densities, such as 96-well or 384-well plates, were commonly used. However, the need for higher throughput and increased efficiency in various research fields led to the development of 1536-well microplates.

The increasing demand for miniaturized assays and the advancements in microplate manufacturing techniques paved the way for the development of 1536-well microplates. These microplates are typically made of materials like polystyrene, polypropylene, or glass, which are compatible with various laboratory procedures.

Over the years, the adoption of 1536-well microplates has grown significantly in pharmaceutical companies, biotechnology firms, academic research institutions, and other life sciences organizations. The market for these microplates continues to evolve, with ongoing innovations in design, automation, and compatibility with laboratory equipment.
