## Abstracts

According to our (Global Info Research) latest study, the global 1D and 2D Barcodes Verification System market size was valued at US\$ 2234 million in 2024 and is forecast to a readjusted size of USD 2831 million by 2031 with a CAGR of 4.0% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The 1D and 2D barcodes verification system is a comprehensive inspection platform for standardized quality assessment of linear barcodes (e.g., EAN-13, Code 128) and 2D matrix codes (e.g., QR codes, Data Matrix). Equipped with high-resolution cameras or laser scanners, the system captures code images and evaluates their symbol grades (A-F) against ISO, GS1, and other international standards, measuring parameters such as minimum reflectance, modulation ratio, defects, and decode threshold. Unlike standard scanners, the system not only confirms readability but also quantifies quality grades to ensure reliability throughout the supply chain—from production to end-user scanning. Typically integrated into production lines or lab environments, it supports automated triggered inspection and data analysis, making it ideal for industries with stringent traceability requirements, such as pharmaceuticals, automotive components, and electronics. Advanced systems may interface with MES (Manufacturing Execution Systems) or ERP (Enterprise Resource Planning) for centralized quality data management.
