Abstracts

The global 1H-imidazole-1-acetic Acid market size is expected to reach \$ 2.32 million by 2032, rising at a market growth of 5.4% CAGR during the forecast period (2026-2032).

In 2025, global sales volume of 1H-imidazole-1-acetic Acid was approximately 13 tons, with a global average market price of around USD 120/kg. The gross margin of major manufacturers in the industry was approximately 35%-45%.

1H-imidazole-1-acetic Acid is a heterocyclic carboxylic acid fine chemical intermediate containing both an imidazole ring and a carboxylic acid group. Its CAS number is 22884-10-2, and its molecular formula is C₅H₆N₂O₂. The product is generally supplied as a white to off-white powder or crystalline powder. Owing to the nitrogen-containing heterocyclic structure of the imidazole ring and the reactivity of the acetic acid group, it can participate in salt formation, esterification, amidation, condensation and further structural modification reactions. It is mainly used as an intermediate in the synthesis of imidazole-containing drugs such as zoledronic acid, and can also be used in impurity research, quality control, organic synthesis building blocks and coordination chemistry research.

The upstream of the industry chain mainly includes imidazole, chloroacetic acid or bromoacetic acid and other haloacetic acid raw materials, alkalis, solvents, acidifying agents, refining auxiliaries and packaging materials. The midstream involves the synthesis, acidification, crystallization, drying, purification and quality testing of 1H-imidazole-1-acetic Acid, with core requirements focused on reaction selectivity, purity, individual impurity control, residual solvents and batch-to-batch stability. The downstream applications are mainly in medicine, chemical and other fields, among which the medicine field is primarily focused on zoledronic acid-related intermediates

and impurity research.
