Abstracts

The global 2-Aminobenzaldehyde market size is expected to reach \$ 17.37 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

In 2025, global sales volume of o-Aminobenzaldehyde was approximately 260 tons, with a mainstream enterprise-level average selling price of about USD 48/kg. The gross margin of major manufacturers in the industry was approximately 32%-48%.

o-Aminobenzaldehyde, also known as 2-Aminobenzaldehyde, has a CAS number of 529-23-7 and a molecular formula of C_7H_7NO . It is an aromatic fine chemical containing both amino and aldehyde functional groups. In its molecular structure, the amino group is located at the ortho position of the benzene ring. The aldehyde group exhibits strong condensation reactivity, while the amino group shows certain nucleophilic reactivity. As a result, the product has relatively high chemical reactivity and is typically supplied as a small-volume organic synthesis intermediate.

The upstream raw materials of o-Aminobenzaldehyde mainly include o-Nitrobenzaldehyde, o-Aminobenzyl alcohol and other precursor materials, as well as reducing agents, oxidizing agents, solvents and fine chemical auxiliaries. Manufacturers usually supply the product according to customer requirements for purity, impurity control, batch-to-batch stability and purchase volume. Downstream demand is mainly concentrated in pharmaceutical intermediates, dye intermediates, pesticide intermediates and fine organic synthesis. With the continued development of pharmaceutical R&D, heterocyclic compound synthesis and customized chemical demand, the product maintains relatively stable application potential within the fine chemical intermediate system.

This report studies the global 2-Aminobenzaldehyde production, demand, key manufacturers, and key regions.
