## Abstracts

The global 2-axis Delta Robots market size is expected to reach \$ 238.1 million by 2029, rising at a market growth of 2.6% CAGR during the forecast period (2023-2029).

Delta (also: parallel) robots have three arms that are connected to a base platform via universal joints. Their arms are arranged as parallelograms to restrict the movement of the end platform. Actuators are located at the base platform, so that passive arms can be lightweight and move with great speed. Applications that require great precision and speed: common applications include packaging, high-precision assembly, and material handling.

This report studies the global 2-axis Delta Robots production, demand, key manufacturers, and key regions.
