Abstracts

The global 2-Dodecylphenol market size is expected to reach \$ 267 million by 2032, rising at a market growth of 4.6% CAGR during the forecast period (2026-2032).

2-Dodecylphenol (2-DDP) is an alkylphenol compound in which a 12-carbon dodecyl chain is attached to the phenol ring at the ortho (2-) position; it is primarily used as a chemical intermediate in the production of oil-soluble phenolic resins, antioxidants, lubricant additives, surfactants, and epoxy curing agents, especially in fuel additives, rubber chemicals, coatings, and specialty resins. Its supply chain begins upstream with phenol (derived from the cumene process using benzene and propylene) and dodecene (produced via ethylene oligomerization or linear alpha-olefin streams from petrochemical crackers); these feedstocks undergo alkylation under acid catalysis to produce 2-Dodecylphenol, followed by purification and fractionation. Midstream players are specialty chemical manufacturers that control alkylation, distillation, and quality grading, while downstream customers include lubricant additive formulators, resin producers, rubber chemical manufacturers, and coatings companies. The market is closely tied to petrochemical feedstock prices, automotive lubricant demand, and industrial resin applications, with production concentrated in regions with strong petrochemical integration such as China, the U.S., Western Europe, and Japan. In 2025, global 2-Dodecylphenol output was about 52,000 tons, with 82,000 tons of capacity. Prices range from USD 3,200 ? 5,800 per ton, with roughly 19% gross margin.

This report studies the global 2-Dodecylphenol production, demand, key manufacturers, and key regions.
