Abstracts

The global 2-Ethoxyethyl Acetate market size is expected to reach \$ 50.74 million by 2032, rising at a market growth of 1.4% CAGR during the forecast period (2026-2032).

2-Ethoxyethyl acetate, also known as ethylene glycol monoethyl ether acetate, CAS 111-15-9. It is an alcohol ether ester solvent containing both ether linkages and ester groups in its molecular structure. Typically a colorless, transparent liquid, it offers strong resin-dissolving power, a moderate evaporation rate, and excellent leveling and wetting properties.

Upstream in the industry chain are raw materials such as ethylene oxide, ethanol, acetic acid, acetic anhydride, catalysts, and basic chemical energy sources. Ethylene oxide and ethanol are used to produce ethylene glycol monoethyl ether, which then undergoes esterification or acylation with acetic acid or acetic anhydride to yield ethylene glycol ethyl ether acetate. Prices at the raw material stage are significantly influenced by ethylene, coal-chemical industry dynamics, the operating rates of acetic acid production facilities, and regional supply-demand balances. The midstream sector encompasses solvent production, rectification and purification, moisture content control, packaging, storage, and transportation, as well as regulatory compliance management for hazardous chemicals. Coatings and inks represent the core downstream demand; however, due to occupational health concerns and regulatory restrictions, high-end downstream formulations are gradually shifting toward less toxic, low-VOC, or propylene glycol ether ester alternatives.

In 2025, global sales volume is projected to be approximately 30,000 metric tons, with an average global market price of around \$1,500 per ton; major manufacturers in the industry typically see gross profit margins in the 10%-20% range.

2-Ethoxyethyl Acetate is a well-established glycol ether ester solvent, with demand primarily driven by traditional applications such as coatings, inks, adhesives, and cleaning agents. Its key advantages include strong solvency, moderate volatility, and relatively stable costs and supply. While industry growth is largely sustained by existing demand for industrial coatings, inks, and solvent-based formulations in Asia, its usage in Europe, the United States, and multinational supply chains is steadily declining due to environmental compliance pressures, as it is increasingly displaced by alternatives such as PMA, DBA, and DCAC.
