A silicon wafer is a thin slice or disc made from high-purity silicon crystal that is used as the base material for manufacturing electronic devices such as integrated circuits (ICs) and solar cells. FZ silicon wafer stands for Float Zone silicon wafer, which is a type of silicon wafer made using the float zone method. In this method, a single crystal of silicon is melted and pulled upwards, allowing impurities to be segregated and thus creating a high-quality, low-defect silicon wafer. FZ silicon wafers are known for their exceptional purity, uniformity, and crystal structure, making them ideal for advanced electronics applications.
