According to our (Global Info Research) latest study, the global 2-Methoxybenzoyl Chloride market size was valued at US\$ 14.81 million in 2025 and is forecast to a readjusted size of US\$ 19.96 million by 2032 with a CAGR of 3.6% during review period.

2-Methoxybenzoyl Chloride (CAS: 21615-34-9) is a key intermediate in organic synthesis and pharmaceuticals; it presents as a white crystalline solid and is corrosive. This substance is frequently utilized in the synthesis of photoinitiators, pharmaceuticals (such as the antihypertensive drug Losartan), and various chemical raw materials.

The primary upstream raw material is o-methoxybenzoic acid (o-anisic acid), from which the product is synthesized via an acyl chlorination reaction using thionyl chloride, phosgene, or phosphorus trichloride. Production costs are significantly influenced by the price of the raw material (o-anisic acid) as well as by environmental regulatory fluctuations affecting chlorinating reagents. In the midstream manufacturing stage, the critical technical challenge lies in purity control during the vacuum distillation process?specifically, managing the proportion of ortho-isomers and minimizing free acid content.

In 2025, global sales volume is projected to be in the range of thousands of tons, with an average selling price between \$8,500 and \$10,000 per ton. The industry's gross margin is expected to hover around 20% to 30%.
