Abstracts

The global 2-Methyl-5-nitroimidazole market size is expected to reach \$ 60.87 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032). 2-Methyl-5-nitroimidazole is an important organic fine chemical intermediate. It appears as a white or light yellow crystalline powder and is primarily used as a key intermediate in the synthesis of important antibiotics and antiprotozoal drugs such as metronidazole, tinidazole, and secnidazole.

From an upstream perspective, the main starting materials include glyoxal and 2-methylimidazole. Global sales in 2025 were approximately 10,000 tons, with an average market price of approximately US\$4,300 per ton. The industry's gross profit margin is in the range of 10%?25%.

Currently, the 2-methyl-5-nitroimidazole industry is in a highly mature stage and undergoing a transformation towards high quality and green production. As a key intermediate for metronidazole and tinidazole, the industry has formed a global supply pattern dominated by Chinese companies. With increasingly stringent pharmaceutical regulations on impurity control, the market is undergoing a selection process of eliminating inefficient production capacity and retaining high-quality capacity. Leading companies are continuously strengthening their positions by leveraging the advantages of supply chain integration (i.e., vertical integration from basic chemical raw materials to intermediates and then to active pharmaceutical ingredients).

This report studies the global 2-Methyl-5-nitroimidazole production, demand, key manufacturers, and key regions.
