Abstracts

The global 2-Methylfuran market size is expected to reach \$ 150 million by 2032, rising at a market growth of 4.5% CAGR during the forecast period (2026-2032).

2-Methylfuran is an important organic chemical intermediate. Its chemical formula is C_4H_8O . At room temperature, it is a colorless, transparent liquid with a distinctive chocolate odor. In terms of physicochemical properties, 2-methylfuran has a melting point of -88.7°C , a low boiling point between 63°C and 66°C , and a flash point of only -22°C , making it a highly flammable liquid. Its density is approximately 0.91 g/cm^3 , it is slightly soluble in water, but miscible with most organic solvents such as ethanol, ether, and acetone. In the pharmaceutical industry, it is an important intermediate in the synthesis of drugs such as vitamin B1, the antimalarial drugs chloroquine phosphate, and primaquine phosphate. In the pesticide field, it is used in the synthesis of pyrethroid insecticides.

In 2025, global 2-Methylfuran sale reached approximately 46,907 Tons, with an average global market price of around 2,244 US\$/Ton. Production capacity reached 50,000 Tons, with a gross profit margin of approximately 27%.

Upstream, biomass sources include corn cobs, straw, and other agricultural residues rich in hemicellulose. Furfural is produced through hydrolysis and dehydration, then further processed via hydrogenation to obtain furfuryl alcohol or directly used in the 2-methylfuran production process. This requires hydrogen, copper-based catalysts, distillation equipment, and explosion-proof storage and transportation systems. Shandong Yino Biologic Group has publicly used non-grain biomass corn cobs to construct its furan product chain, while Hongye Holding Group focuses on agricultural residues for products such as furfural, 2-methylfuran, and 2-methyltetrahydrofuran.

Midstream representatives include Minasolve & Pennakem, International Furan Chemicals, Shandong Yino Biologic Group, Jiangsu Qingquan Chemical, and Hongye Holding Group; Capot Chemical provides high-purity products and custom synthesis capabilities. Downstream value is mainly concentrated in 2-methyltetrahydrofuran, pharmaceutical intermediates, pesticide intermediates, specialty reaction feedstocks, and solution polymerization. Customers are more concerned with batch stability, impurity profiles, moisture content control, and long-term supply assurance.
