Abstracts

The global 2-Naphthoic Acid market size is expected to reach \$ 66.26 million by 2032, rising at a market growth of 4.5% CAGR during the forecast period (2026-2032).

In 2025, the global production of 2-naphthoic acid is estimated to be approximately 8,600 tons, with an average selling price of around US\$5,500 per ton. The capacity of a single production line is approximately 500-800 tons per year, with an average gross profit margin of about 10-20%. 2-naphthoic acid is an organic compound containing a naphthalene ring and a carboxyl group. It is an important intermediate in organic synthesis and can be used as a raw material for dyes, fluorescent probes, and plant growth regulators. It is also used in the synthesis of various complexes, has a stable structure, and finds applications in the pharmaceutical and pesticide industries.

The main upstream raw material for 2-naphthoic acid is 2-methylnaphthalene (obtained through catalytic oxidation), which originates from the separation products of coal tar or petrochemical processes. Downstream applications are mainly in the dyes and pigments industry (as a key intermediate for the synthesis of azo dyes, naphthols, and organic pigments), the pharmaceutical industry (used in the preparation of active pharmaceutical ingredients such as non-steroidal anti-inflammatory drugs), and the field of functional materials (such as UV absorbers, fragrances, and polymer modifiers).
