Abstracts

According to our (Global Info Research) latest study, the global 2-Nitrobenzyl Alcohol market size was valued at US\$ 30.19 million in 2025 and is forecast to a readjusted size of US\$ 42.74 million by 2032 with a CAGR of 5.1% during review period.

In 2025, the global production of 2-nitrobenzyl alcohol was approximately 1630 tons, with an average selling price of about US\$18/kg. The production capacity in 2025 was 1890 tons, with an average gross profit margin of approximately 20-30%. 2-nitrobenzyl alcohol is an organic compound containing both nitro and hydroxyl groups, and is an important intermediate in the synthesis of pharmaceuticals, pesticides, and materials. It is typically a yellow crystalline solid and serves as a versatile building block in organic synthesis, used in the synthesis of fine chemicals such as drugs and dyes.

The main upstream raw materials for 2-nitrobenzyl alcohol are o-nitrotoluene (obtained through benzylic halogenation followed by hydrolysis) or o-nitrobenzaldehyde (obtained through reduction). Its synthesis relies on basic aromatic hydrocarbon nitration products. Downstream applications are highly focused, primarily as a key building block for photoprotective groups (PGs) in high-end photochemical fields such as photoresists, photocontrolled drug release systems, and biological probes; it also serves as a specialized intermediate for the synthesis of specific quinolone antibiotics and other fine chemicals.
