## Abstracts

According to our (Global Info Research) latest study, the global 2-Octanol market size was valued at US\$ 103 million in 2025 and is forecast to a readjusted size of US\$ 144 million by 2032 with a CAGR of 5.3% during review period.

2-Octanol is insoluble in water and can be mixed with organic solvents such as alcohol, ether and chloroform. Low Toxicity, a group of skin and mucous membrane stimulation, mainly used in the production of plasticizers, emulsifiers, solvents and organic synthetic raw materials. It is the main raw material for the production of some esters. The organic chemical industry is used as solvent, dehydrating agent, defoaming agent, etc. . The Coal Industry is used as flotation agent, the agricultural industry is used to produce emulsifier, and the chemical fiber industry is used as fiber oil agent The spice industry is used in the production of intermediates and so on. In 2025, global 2-Octanol production reached approximately 71,600 Tons, with an average global market price of around US\$ 1,403 per ton.

The primary driver for the 2-Octanol market is the global shift toward non-toxic, eco-friendly plasticizers. As a key feedstock for Dicapryl Phthalate (DCP), 2-Octanol offers a sustainable alternative to traditional phthalates like DOP/DBP, which face increasing bans in medical devices, toys, and food packaging. The bio-derived nature of 2-Octanol aligns with ESG goals, providing a significant growth lever in the PVC additives sector.

Major global brands in the cosmetics and detergent industries are committed to Scope 3 carbon reduction targets. 2-Octanol, being 100% derived from renewable castor oil, offers a significantly lower carbon footprint compared to petroleum-derived C8 alcohols (like 2-Ethylhexanol). This 'green premium' allows 2-Octanol producers to capture market share in high-end specialty chemicals, where brand owners are willing to pay

more for bio-carbon content to meet their sustainability reporting requirements.

As the co-product of Sebacic Acid, 2-Octanol benefits from the explosive growth of bio-based polyamides in the automotive and electronics industries. The expansion of Sebacic Acid production lines naturally increases the availability of 2-Octanol. This creates a unique opportunity to leverage the economy of scale from the nylon market to lower the cost of 2-Octanol, making it more competitive against synthetic alternatives in industrial surfactant and solvent applications.
