The global 2 Way Coolant Flow Control Valve market size is expected to reach \$ 92 million by 2029, rising at a market growth of 7.8% CAGR during the forecast period (2023-2029).

Thermal management is the capacity of controlling a system and its subsystems' temperature; for instance, e-machine, cabin, battery, engine, etc. An effective coolant flow controller is required within this system for closing the coolant flow, regulating the coolant flow, and switching over coolant circuits. This coolant flow control valve allows functions to decrease the engine's heat up time via engine zero flow, allowing quicker cabin heat up by heading the heat to the heat exchanger core and for decreasing the coolant flow for an optimized temperature of the engine. 2-way valves are pretty simple and straight-forward. A 2-way valve is any type of valve with two ports: an inlet and an outlet port.
