Abstracts

2-way slip-in cartridge valves, also known as 2/2-way cartridge valves or logic valves, are a type of hydraulic control valve that manage the flow of fluid in a hydraulic system. These valves are designed to fit into machined cavities within a manifold block, which allows for a compact and efficient system design. The 'slip-in' designation refers to how the valve is installed into the hydraulic system—by slipping it into the cavity in the manifold. This design feature facilitates easy maintenance and replacement of the valve without the need to dismantle the entire system.
